GRATE LIFTING TOOL

SAVE TIME & AVOID STRAIN WHEN MOVING EXHAUST PIT GRATES

Replacing exhaust filters in a downdraft paint booth is easy with the Grate Lifting Tool from Global Finishing Solutions (GFS). This handy tool does the heavy lifting for you, picking up exhaust pit grates so you can **quickly change filters without straining your back or pinching your fingers between grates**. Made from sturdy metal, the Grate Lifting Tool can **hold up to 260 pounds**.

HOW IT WORKS

Simply slide the front prongs of the Grate Lifting Tool between grates, then step on the back portion of the tool to lift it up, while angling the top of it. The grates slide right out and can be rolled out of the way, allowing access to the exhaust filters. Once the filters are changed, the Grate Lifting Tool can be used to pick up the grates and roll them back into place.

FEATURES & BENEFITS

- Great ergonomics for ease of use
- Comfort-grip handles
- Kick plate for added lifting power
- Replacement parts readily available
- Easy assembly to immediately start saving your shop time
