PIG GRIPPY MAT PROTECTIVE FLOOR COVERING

A unique, adhesive floor covering for paint booths, the PIG® Grippy Mat protects the booth floor, while also trapping overspray, dirt, dust and particles for better quality paint finishes and a safe, bright working environment.

Easy to Apply & Replace

With the help of an Installation Board or Roller, the PIG Grippy Mat is easy to install. It also peels up easily for quick change-outs.

Stays in Place

The self-sticking backing on the PIG Grippy Mat keeps the floor covering securely in place without shifting, sliding or causing a trip hazard.

Durable & Long-Lasting

The PIG Grippy Mat is durable enough to withstand foot and vehicle traffic — lasting up to three months depending on the amount of overspray and cleaning.

Noise Reduction & Improved Comfort

In addition to protecting the booth floor, the padding on the PIG Grippy Mat reduces noise and makes standing and kneeling more comfortable.

Bright Finishing Environment

Bright gray color helps to evenly distribute light and eliminates shadows and reflections on your paint job.

Easy Build-up Control

No need to scrape or use chemicals to remove overspray from your floor. You can sweep or vacuum the PIG Grippy Mat daily to remove dried overspray, dust and debris.

Safe for Paint Spraying & Mixing Environments

Chemical and flame resistant, the PIG Grippy Mat does not produce lint and meets OSHA standards and NFPA 33 to dissipate static.

Models

Part No.	Description
217-952	32" x 150' Roll

Best for:

Automotive paint booths

- Ultra® Booths
- Performer Booths

Large industrial paint booths

- General Purpose Booths
- Large Equipment Booths

Part No.	Description
217-951	32" x 100' Roll

Best for small industrial paint booths:

- Open Face Booths
- Enclosed Finishing Booths

Part No.	Description
217-950	32" x 50' Roll

Best for small surface areas:

- Bench paint booths
- Paint mix rooms

ACCESSORIES

Installation Board & Safety Knife

Part No.	Description
217-954	Board contains a pre-scored template for accurate cuts

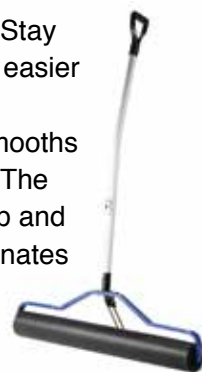

Installing your PIG Grippy Mat is a breeze with the Installation Board & Safety Knife. The Installation Board serves as a cutting board to prevent damage to floor during cutting and can be used to quickly smooth out the PIG Grippy Mat on your booth floor. A pre-scored template on the Installation Board guides the Safety Knife, producing clean, accurate cuts. The Safety Knife has a recessed blade with protective edges to eliminate worker injuries and damage to the booth floor.

Installation Roller

Part No.	Description
217-953	Ergonomically designed steel framed roller

Installing long runs of the PIG Grippy Mat? Stay off your knees and make the job faster and easier with this walk-behind roller. The Installation Roller unrolls the mat as you push it and smooths it into place without air pockets or bubbles. The ergonomic design — with a comfortable grip and angled handle for upright operation — eliminates back strain and knee pain. Built to last, the Installation Roller features a durable steel frame, aluminum handle and nitrile rubber roller. The kickstand allows you to stand the roller upright.

Other Booth Protection Products

Global Finishing Solutions also offers the following booth protection products to keep your booth clean, bright and running efficiently and smoothly.

BOOTH SHIELD®

Peelable booth protection for paint booth walls, lights and windows, Booth Shield provides superior protection and creates a safer spraying environment. The coatings can be applied quickly and removed easily, without damaging the underlying substrate.

LIGHT FIXTURE LENS PROTECTORS

Protect your light fixtures from overspray and darkening with Light Fixture Lens Protectors from GFS. This clear, cling-on plastic film has a 2-mil thickness and is easy to apply and replace. Rolls are available in three widths and provide a crystal-clear protective coating.

DIRTRACK MATS

Prevent contaminants from entering the booth with DirtTrack mats. Position the multi-layered, adhesive mat in front of product or personnel doors to trap dirt and dust from shoes or tires. Once a sheet becomes soiled, it can be simply peeled off and discarded, leaving a fresh mat in its place.
